This course includes 2 weeks of study at WCU, followed by 3 weeks of study and exploration in London. In the context of studying the physics and physicists who made some of the major contributions in 20th c. physics, and in the interest of studying other historical physics and science, we will visit the Science Museum, Churchill’s Cabinet War Rooms, Westminster Abbey, The Royal Observatory at Greenwich, and the British Museum. We will also have other excursions to the Tower of London, Hampton Court, the London Eye, and outside of London to Stonehenge and Bath.

A not-for-credit option is available to a limited number of participants. See Dr. Waite for details.
